Action for clear rivers of Montenegro

Green Home started the implementation of the project "Action for clear rivers of Montenegro", throughout we want to contribute achieving the national strategic goals in the prevention of surface and groundwater pollution, as well as reducing and monitoring wastewater discharge from concentrated and dispersed sources.

The main objectives of the project are aimed at strengthening capacities of the local and national inspections and controls to perform more efficient water sampling in Cehotina, Zeta and Lim Rivers, providing technical support for monitoring and encouraging civic activism to participate in surface water monitoring;

The project intends to strengthen cooperation between water managers, inspection bodies, experts and citizens, where our main collaborators on the project are: Directorate for Inspection Affairs, Institute of Hydrometeorology and Seismology of Montenegro, Center for Ecotoxicological Testing, experts from the Faculty of Science, University of Montenegro and NGOs.

The project is being implemented with the financial support of the Ministry of Agriculture and Rural Development for a period of 7 months, from August 2020 to March 2021.
